

Public Agenda Mosaic Plot Activity

1. Create a contingency table with effort as the row and grade as the column.
 - How does this table compare to the one with grade as the row and effort as the column?
2. Create a mosaic plot with (effort, grades)
 - What do you see in this plot?
 - Compare your plot to the one done previously. Does it tell a different story? Justify your answer with features of the plot.

Try making mosaic plots with three different combinations of the available variables: year, effort, homework, grades. Choose one of these other plots, describe what you see, and explain what story it tells.
